Profile

I am a Software Engineering student who enjoys turning technical ideas into clear, usable products. My work is centered on applied AI, mobile development, and product-oriented engineering, with an emphasis on building systems that are reliable, understandable and useful in real scenarios.

Education

University of Illinois Chicago

Bachelor in Computer Science (in progress)

Palatine, IL

Aug. 2024 – Present

Work Experience

Information Technology Support Specialist

Prospect Heights School District 23

June 2022 - Aug. 2024

Prospect Heights, IL

- Supported daily IT operations while communicating with teachers and staff to diagnose technical issues and explain solutions.
- Helped troubleshoot basic network issues and software installations

Projects

AI Calorie Tracker | Flutter, Dart, Python, FastAPI

Dec. 2025 - Present

- Developed a full-stack nutrition MVP featuring AI-powered photo analysis with 80%+ calorie estimation accuracy and a sub-6s average response time.
- Built a Flutter mobile application with FastAPI backend integration, supporting camera-based capture, manual logging, and RESTful API communication.
- Engineered robust product logic for personalized goal calculations and local data persistence using Shared Preferences.
- Enhanced UX reliability by implementing user-correction flows and portion-confirmation steps to validate and refine AI-generated results.

NotesHub | Python, Kotlin, TensorFlow Lite

Nov. 2024 - Jan. 2025

- Trained a custom NLP text classification model in Python and deployed it to Android using TensorFlow Lite
- Designed a consistent preprocessing pipeline to ensure identical inference results between training and mobile deployment
- Trained on 2,500 samples and achieved 80% validation accuracy.
- Enabled offline, low-latency on-device inference with automatic note categorization.
- Debugged cross-platform inference issues using token-level validation and model checksum comparison.

Local Explorer | Swift, SwiftUI, Google Maps SDK, Google Directions API

June 2022 - Aug. 2024

- Developed an iOS app that integrates Google Maps to display nearby restaurants, hotels, and attractions.
- Implemented dynamic filtering by category and route generation using Google Directions API.
- Designed a clean, accessible SwiftUI interface with map-based navigation and category-driven UI updates.
- Integrated APIs and handled data persistence for location-based results. Including parsing and transforming JSON data for display in the app.

Technical Skills

Languages: Python, C++, HTML/CSS, Dart

Developer Tools: Git, Docker, Google Cloud Platform, VS Code, PyCharm,

Libraries: Pandas, NumPy, TensorFlow, TensorFlow Lite

Databases: SQL (basic),

Frameworks/Tools: Flutter, FastAPI, SwiftUI, Google Maps SDK, Xcode, Jupyter

Additional Info

Languages: English (Fluent), Ukrainian (Native), Russian (Native)

STEM Scholar - Harper College

Member, American Association for the Advancement of Science (AAAS)
